COMPACT
disc
DIGITAL AUDIO

PHILIPS

1. Specification

System	: Optical (compact disc system)	Total harmonic distortion	: 0.03% (at 1kHz)
Number of quantization bits	: 16-bit linear system	Power supply	: 10.5-16.0V
Sampling rate	: 176.4kHz	Consumption (play)	: 1A
Oversampling	: 8 times	Output voltage	: 750mV/10k
D/A convectors	: 2x 20-bit	Access time (load magazine till play)	: max. 31s
Channels	: 2-channel stereo	Bus system	: D2B
Channel separation	: 85dB (at 1kHz)	Dimensions	: 283x75x193mm
Frequency response	: 5-20.000Hz (1.0dB)	Weight	: 2.5kg
S/N ratio	:98dB		

2. Connections (Fig.1)

Fig. 1

3. Operation (Fig. 2)

Preparation for playback.

- Insert one or more CDs (max. 6) into the disc housing of the magazine with the label facing up.
- Insert the magazine all the way into the changer with the arrow facing up.
- Slide the door to the left to close the magazine compartment.

Removing a CD from the magazine.

- Push the lever on the magazine for the relevant CD. The CD will come out halfway from the magazine.
- Pull out the CD by the edge.

Note: Hold the CD so that no finger prints are left on the disc surface.

Removing the magazine.

- Slide the door to the right.
- Press the eject switch.

- Notes:**
- Do not insert heat-deformed CDs into the magazine.
 - Only one CD can be inserted in each housing.
 - To play a 3" disc, only use adapter ring SBC3580.
 - Do not forcibly remove the magazine. Refer to "Magazine emergency eject", page 10
 - Only Compact Discs with the logo shown below can be used.

One CD in each housing (max. 6 CDs)

Eject switch

Fig. 2

4. Function description

Function	Step	Description	Fig.
Magazine insertion	1)	The magazine transports the eject lever.	3
	2)	The eject lever drives the magazine lock arm.	
	3)	The magazine lock arm locks the magazin and operates the magazine lock switch.	
Disc loading	1)	The elevator motor rotates (NOR).	4
	2)	The rotation is transmitted to gears A, B, C, D, E.	
	3)	Gear E drives the CR chassis in direction F.	
	4)	The photo interruptor counts the holes H to control the level of the CR chassis.	
	5)	The CR chassis stops at the level of the chosen CD.	
	6)	The loading motor rotates (NOR).	5
	7)	The rotation is transmitted to gears I, K, L and via gear K also to gears J, M, N, O.	
	8)	The rotation of gear L drives the disc eject lever back and forth in direction P, Q.	
	9)	The disc eject lever ejects the CD from the magazine.	
	10)	The drive roller (same spindle as gear O) rotates.	6
	11)	Sandwiched between drive roller and free roller the CD moves towards the clamber.	
	12)	Photo sensors 1, 2, 3 are consecutively blocked by the CD and finally only sensor 3 is in blocked condition.	5
	13)	The loading motor stops upon judgement: CD entered.	
	14)	The elevator motor rotates REV.	4
	15)	The rotation is transmitted to gears A, B, C, D, E.	
	16)	The rotation of gear E drives the CR chassis in direction G.	
	17)	The CR chassis transports the clamber, which clamps the CD.	
	18)	The CR chassis drives the arm of the home position switch and operates the home position switch.	
	19)	The photo interruptor counts the holes H in gear C and the elevator motor stops at judgement: CR chassis in home position.	
Play	1)	The spindle motor rotates the CD.	7
	2)	The sled motor rotates.	
	3)	The rotation is transmitted through the gears to the feed screw and drives the pick-up unit.	
	4)	The lead-in position of the CD is detected by the inner limit position switch and the reading of the CD data starts.	

Function	Step	Description	Fig.
Return of the CD to the magazine	1)	The elevator motor rotates.	4
	2)	The rotation is transmitted to gears A, B, C, D, E.	
	3)	The rotation of gear E drives the CR chassis in direction F.	
	4)	The clamber is removed.	
	5)	The CD is sandwiched between drive roller and free roller.	
	6)	The photo interruptor counts the holes H to control the level of the CR chassis.	
	7)	The CR chassis stops at the level of the chosen disc.	
	8)	The loading motor rotates.	8
	9)	The rotation is transmitted to gears I, J, K, M, N, O.	
	10)	The drive roller (same spindle as gear O) rotates and drives the CD towards the magazine.	5
	11)	Blocking of photo sensor 3 is cancelled.	
	12)	Photo sensors 2 and 1 are consecutively blocked by the CD and the blocking is cancelled again.	
	13)	The loading motor stops upon judgement: CD in magazine.	
Magazine ejection	1)	The eject button operates the eject switch.	9
	2)	The elevator motor rotates.	4
	3)	The rotation is transmitted to gears A, B, C, D, E.	
	4)	Gear E drives the CR chassis in direction G.	
	5)	The CR chassis drives the arm of the home position switch and operates the home position switch.	
	6)	The photo interruptor counts the holes H and the elevator motor stops at judgement: CR chassis in home position.	
	7)	The loading motor rotates.	5
	8)	The rotation is transmitted to gears J, K, L.	
	9)	The rotation of gear L drives the disc eject lever back and forth in direction P, Q.	
	10)	The disc eject lever drives the eject arm.	9
	11)	The eject arm drives the eject lever, the magazine lock arm is released and the magazine is ejected.	
	12)	The magazine lock switch is switched off and judgement is given: magazine ejected.	

Fig. 8

Fig. 9

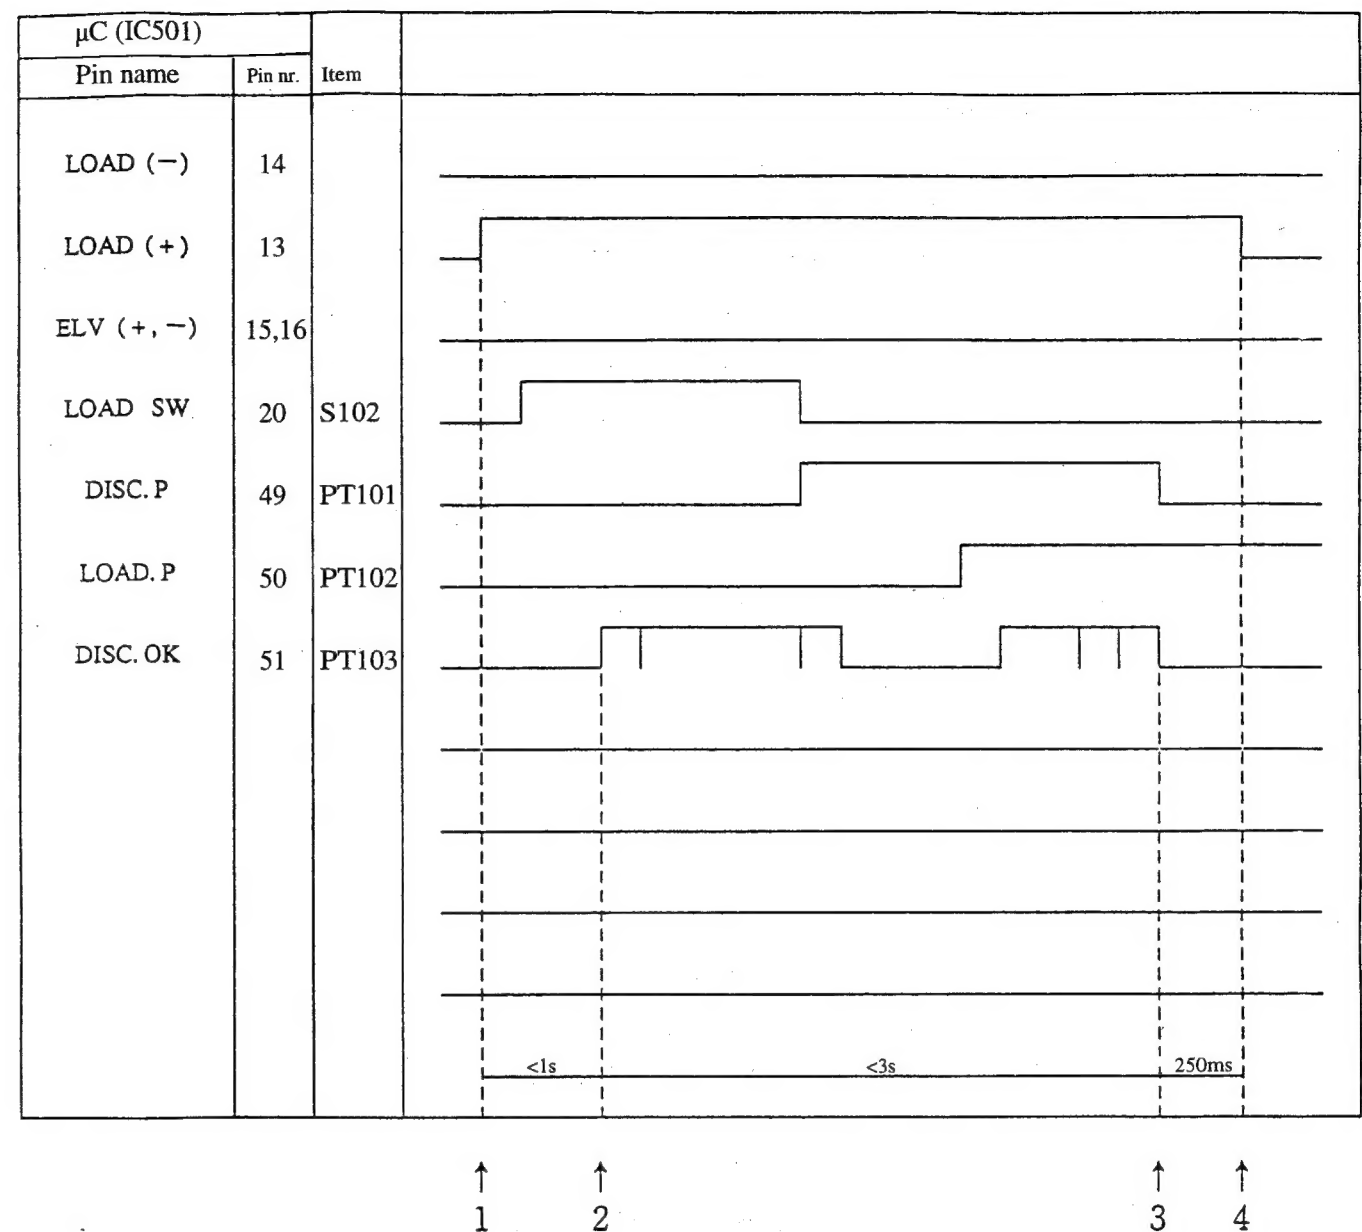

Fig. 5

5.1 Disc loading (with CD).

SEQUENCE

1	Pin 16: loading motor activation (forward direction).
2	Disc ejected from the magazine and detected by PI101 within 1s (DISC OK = "H").
3	μC conditions change after 3s: pin 51 = "L", pin 49 = "L", pin 50 = "H", pin 20 = "L".
*	If conditions are not met within 3s, the disc will be unloaded.
4	After sequence 3 is completed, the μC waits for 250ms, then pin 13 gets "L".

5.2 Disc unloading.

SEQUENCE

SEQUENCE	
1	Pin 14 = "H": loading motor activation (reverse direction).
2	μ C conditions change after 3s: pin 51 = "L", pin 49 = "L", pin 50 = "L", pin 20 = "L".
*	If condition is not met within 3s, the disc will reload and the sequence will be repeated.
3	After sequence 2 is completed, the μ C waits for 250ms, then pin 14 gets "L".
*	After 3 unsuccessful attempts, the display shows "ERROR". The elevator moves to "home position".
*	Unloading process complete: pin 50 = "L", pin 49 = "L", pin 51 = "L", pin 20 = "L".

5.3 Disc loading (without CD).

SEQUENCE

SEQUENCE	
1	Pin 16 = "H": loading motor activation (forward direction).
2	The μ C waits for 1s to meet the conditions: pin 49 = "H", pin 50 = "H", pin 51 = "H".
*	If conditions are not met, the μ C judges a "no disc" condition and the unloading cycle is activated. Pin 14 gets "H", pin 13 gets "L".
3	When pin 14 is "H" the μ C waits for 250ms, then pin 14 gets "L". This completes the loading cycle.
4	The elevator moves to the next disc housing in the magazine. During this sequence the μ C applies a steady pulse to pin 14 or 15.

5.4 Disc change.

SEQUENCE

1	Pin 14 or 13 is held "L" (depending on the direction of the elevator) until the elevator is at the housing position of the target CD.
2	When the elevator has reached the proper position, a pulse is applied to pin 15 or 16.
3	When the elevator has reached the proper position, pin 15 or pin 16 gets "L".
*	If no signal for 1s from disc sensor the display will show "ERROR".
*	If no signal for 3s from disc sensor the display will show "ERROR".

5.5 Return to home position.

SEQUENCE

Home position	This is the rest position for the elevator mechanism before the play mode starts and during the eject cycle.
1	Pin 14 gets "H". The elevator mechanism starts lowering.
2	When the elevator has reached one position prior to the target one, a pulse is applied to pin 16.
3	Pin 21 gets "L".
4	When the home sw gets "L", the first disc signal is detected. Pin 16 gets "L".

5.6 Magazine eject.

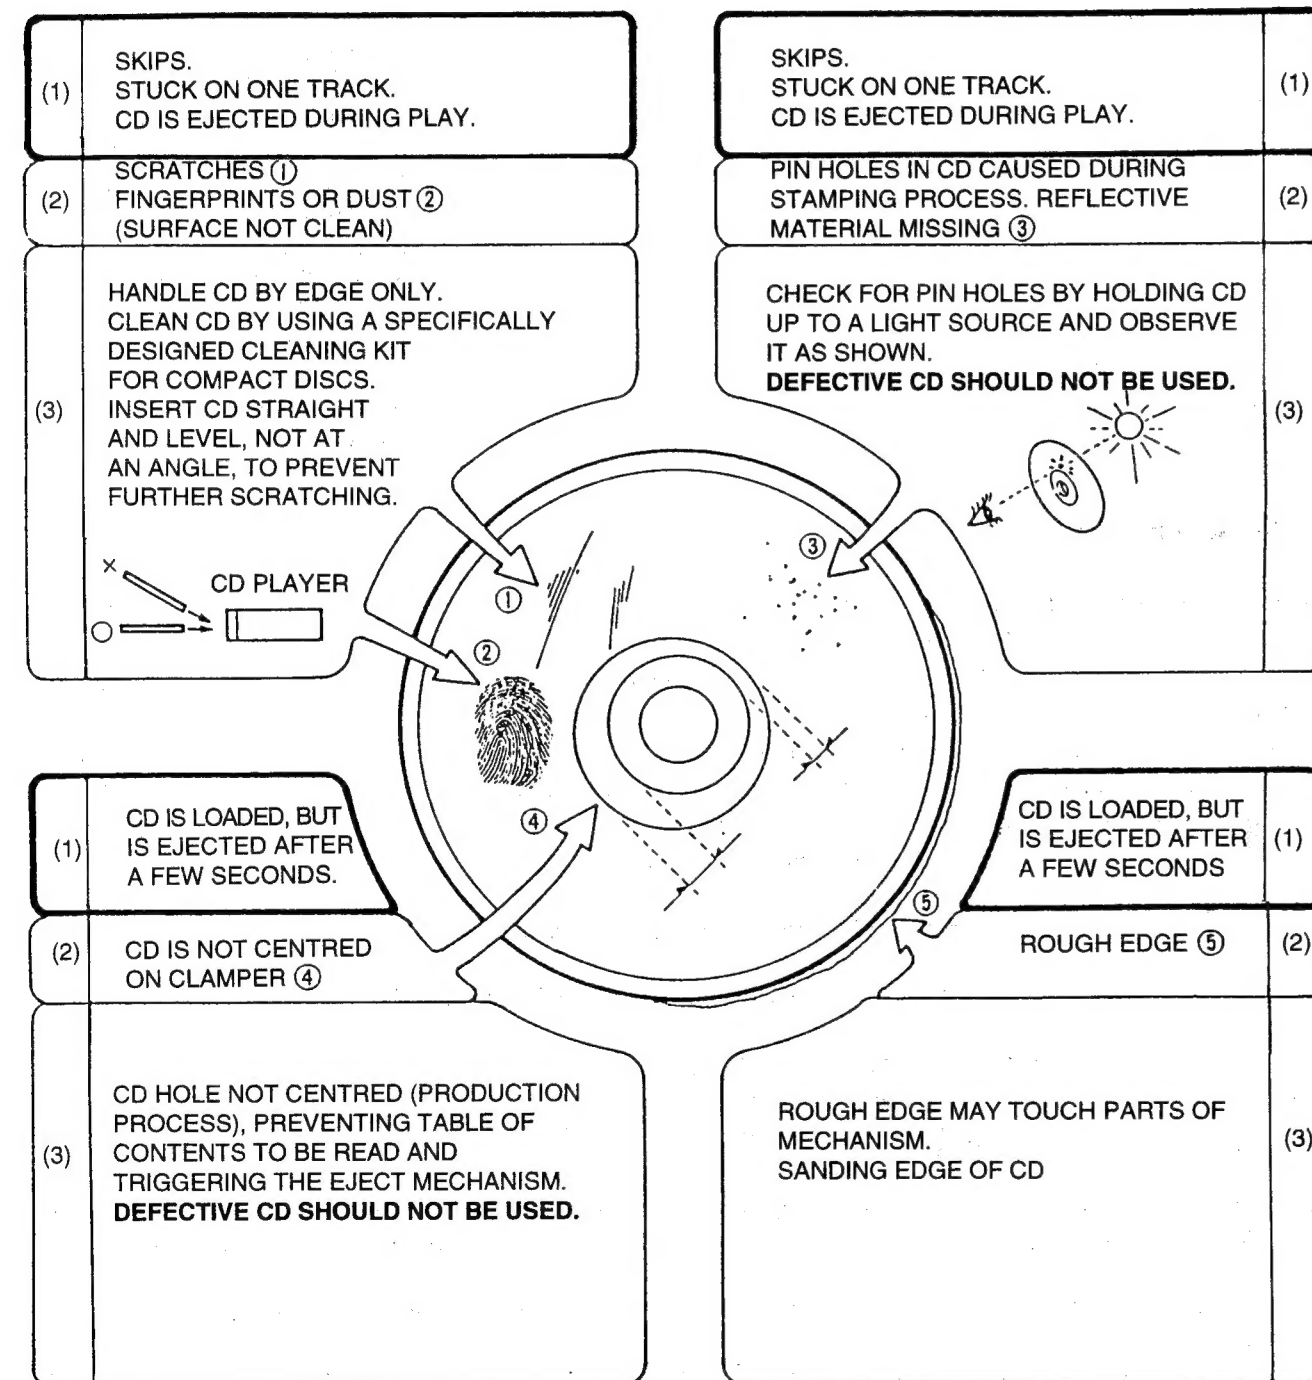

SEQUENCE

1	Pin 13 gets "H" for 1s.
2	When the magazine has been ejected, pin 22 gets "H".
3	Pin 14 gets "H" for 1s.
4	Eject cycle completed: pin 22 = "H", pin 20 = "L".
*	If eject is unsuccessful, the process will be repeated three times. After that the LCD shows "ERROR".

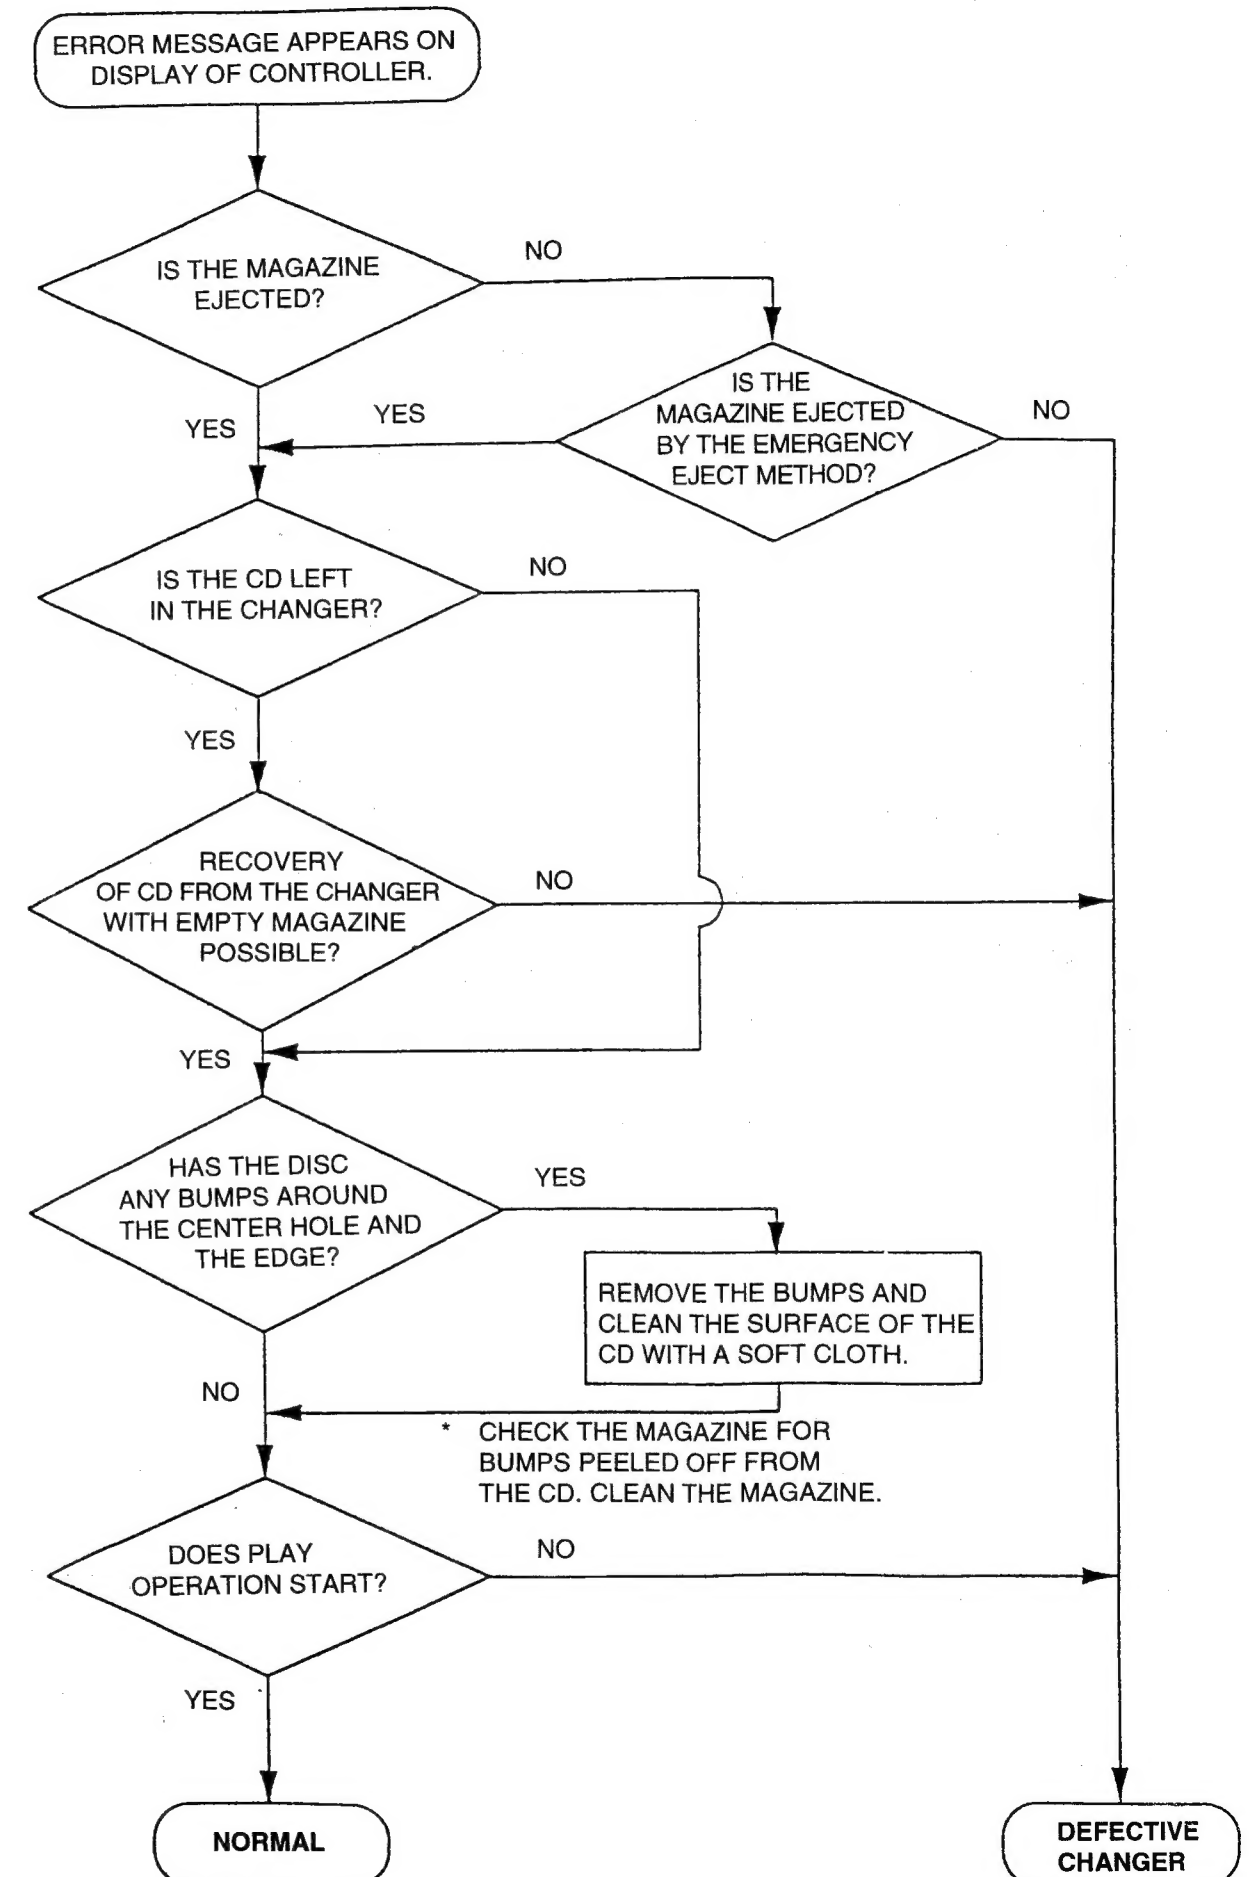

6. CD Symptoms and failure guide.

For symptoms occurring with specific discs.

NOTE: (1) symptoms
(2) cause
(3) solution

7. ERROR DIAGNOSIS FLOW CHART.

8. Magazine emergency eject

Method:

- Fold a business card vertically in half.
- Slide the door of the changer to the right.
- Insert the card between the CD magazine and the changer mechanism.
- The magazine will be ejected when the card is inserted approx. 40mm.

Principle:

Fig. 10

Fig. 11

9. Sensor status on errors.

Perform the repair based on the following information when the changer is offered for repair after an error indication appeared on the control set.

9.1 Relation between ERROR and sensors

Indication	DISCP	DOKSW	LODSW	DSCIN	ARMSW	MAGSW	HMPSW	Cause of error
ERROR (1)	-	X	X	X	X	-	-	A CD is caught between the magazine and the roller. Neither loading nor unloading is possible.
ERROR (2)	-	X	X	X	-	-	-	Unloading has been tried 3 times, but unloading is impossible.
ERROR (3)	-	X	X	X	-	-	-	Unloading has been tried for 3s, but unloading is impossible.
ERROR (4)	-	X	X	X	-	-	-	Loading has been tried for 3s, but loading is impossible.
ERROR (5)	-	-	-	-	X	-	-	After completing the unloading or loading, the loading arm-detector switch is not switched off for 3s.
ERROR (6)	X	-	-	-	-	-	X	Disc changing is not completed within 3s.
ERROR (7)	-	-	-	-	X	X	-	Eject operation has been executed 3 times, but the magazine cannot be ejected.

9.2 Sensor function

Sensor	Switching function for detecting	Item
DISCP	Position of the CD (photo)	PI101
DOKSW	Whether the CD is housed into the magazine (photo)	PT101
LODSW	Whether the CD is loaded into the carriage (photo)	PT102
DSCIN	Whether the carriage contains any CD (photo)	PT103
ARMSW	Status of the loading arm, pulling the CD from the magazine	SW101
MAGSW	Whether the magazine is being inserted into the changer	SW102
HMPSW	Whether the carriage has moved to the home position	SW103

9.3 Conditions for completion of the loading/unloading operation

The judgement of completion is made by 3 sensors, viz. DOKSW, LODSW and DSCIN.

	DOKSW	LODSW	DSCIN
Loading complete	OFF (L)	ON (H)	ON (H)
Unloading complete	OFF (L)	OFF (L)	OFF (L)

- a) If DOKSW is OFF, LODSW is ON and DSCIN is ON within 3s after starting of loading, ERROR (4) appears.
- b) If DOKSW is OFF, LODSW is OFF and DSCIN is OFF within 3s after starting of unloading, ERROR (3) appears.
- c) If unloading has been repeated 3 times and the CD cannot be inserted into the magazine, ERROR (2) appears.
- d) If loading and unloading have been repeated 3 times and the CD cannot be inserted into the carriage or the magazine, ERROR (1) appears.
- e) If the loading arm-switch has not been switched OFF (L) within 3s after the loading has been completed or judgement has been made on the completion of unloading, ERROR (5) appears.

Fig. 12

9.4 Conditions for completion of disc ejection

The judgement is made by 2 switches, viz. ARMSW and MAGSW.

	ARMSW	MAGSW
Ejection complete	OFF (L)	OFF (H)

- a) If the switches, ARMSW and MAGSW, have not been switched OFF, ERROR (7) appears.

9.5 Conditions for completion of disc change

The judgement is made by counting the number of pulses from DISCP (photo interruptor).

Fig. 13

- a) If the pulse from DISCP has not been present for 3s during disc change, ERROR (6) appears.

9.6 Function after error indication

Error	Function after indication
(1)	No function.
(2)	Pulls the CD into the carriage and moves to home position, waits for signal from eject switch. When the eject button is pressed, ejects the magazine leaving the CD inside the mechanism.
(3)	Loads the CD into the mechanism again, performs unloading operation again. If CD cannot be unloaded after 3 times ERROR (3) will appear.
(4)	Performs the operation of the next CD and ERROR (4) will disappear.
(5)	Performs unloading operation in the loading mode, loading operation in unloading mode. After loading/unloading 3 times and if loading arm-switch has not switched OFF, ERROR (1) appears.
(6)	Waiting for signal from eject switch. When the eject button is pressed, moves the carriage to the home position and ejects the magazine. If any CD is left inside the mechanism after the eject operation, ERROR (2) will appear. If no CD is left inside, ERROR (6) will be replaced by "--".
(7)	Waiting for signal from eject switch. When the eject button is pressed, performs eject operation again. If magazine is not ejected after 3 times, ERROR (7) will appear.

10. Disassembly instructions

10.1 Cabinet etc.

- Metal cover, pos. 2.

Remove screws 5 (left 2x, right 2x, rear 3x).
Lift cover at the bottom side and slide it to the rear (mind the screws for hor/vert mounting).

- Front, pos. 1.

Lift the side lugs over the locking hooks.
Slide the front from the chassis.

- Inner cover, pos. 14.

Remove screws 27.
Slide the cover from the chassis.

- Main pcb (Fig. 14).

Remove base plate 2.
Remove screws marked "■".
Remove bracket marked "@".
Slide the pcb in the direction of the arrow to release it from 3 locking pins.
Disconnect all connectors, unsolder ground wire.

- Damper brackets, pos. 16, 22 (Fig. 14-16).

Remove 8 damper holders 7 by lifting hooks D.
Remove damper brackets 16, 22 (screw "▲" in each damper).
Unhook springs 11, 25 from the chassis.

10.2 CD mechanism

- Pick-up unit, pos. 278 (Fig. 17).

Remove screws marked "⊕".

- Sled motor, pos. M103 (Fig. 17).

Remove solder (A).
Remove bracket with motor (screws marked "X").
Remove solder (B).
Remove screw marked "❖".

- Head unit, pos. HD101 (Fig. 17).

Remove shaft bracket, screw bracket (screws marked "◇").

- LED pcb (Fig. 18).

Remove screws marked "●".

- Switch pcb (Fig. 18).

Remove screw inside inner cover 14.
Lift pcb from black and clear holders.

- Photo pcb (Fig. 19, 20).

Remove top chassis and base chassis (7 screws marked "∞").
Remove chassis CR.
Remove solder C.
Remove screw marked "☆".

- Sensor pcb (Fig. 21).

Remove solder D and E.
Remove screws marked "☆".

- Loading motor, pos. M101 (Fig. 21).

Remove solder E.
Remove screws marked "★".

- Elevator motor, pos. M102 (Fig. 22, 23).

Remove gear C (washer A).
Remove motor bracket (screws marked "◇").
Remove solder F.
Remove screws marked "◆".

- Interrupt pcb (Fig. 22, 23).

Remove motor bracket and solder (see above).
Remove screws marked "#".

- Magazine photo pcb (Fig. 24).

Remove magazine chassis (screws marked "※").
Remove screws marked "◎".

11. Checks and adjustments

11.1 Service tools

Test CD "skew disc"	4822 701 11922
Test CD "eccentricity"	4822 701 11923
Test CD "5" & "5A"	4822 397 30096
Test CD "Audio signals 1"	4822 397 30184
Test CD "Max. diameter"	4822 397 60141
Jig height adjustment	4822 395 80412

11.2 Checks

- Initial start-up, rafoc unit.

Insert a magazine with test CD "skew disc".
Play tracks 1-9 (first 20 min.) without interruptions.

- Disc drive motor and servo motor.

Insert a magazine with test CD "eccentricity".
Play tracks 1-20 without interruptions.

- Interruptions, black dots, finger prints.

Insert a magazine with test CD "5A".
Playback tracks 9, 11-17 (preferred: 17), 18, 19 (preferred 19) without interruptions.

- Min/max read-out diameter.

Insert a magazine with test CD "Max. diameter".
Playback tracks 1 and 14 without interruptions.

- Specification.

Check with test CD "Audio signals 1".

11.3 Adjustments

- Elevator height (Fig. 25-27)

Remove 3 gears D (2 washers A and ring B).
Rotate 3 gears E and move chassis CR in direction F (to the level of the CD magazine).
Insert 3 adjustment jigs near gears E between chassis and the chassis CR.

Adjust each gear E to min. gap and a smooth moving of each jig.

Adjust gear C to fit H-hole with hole in chassis.
Mount gears D. Take care there is no gap between gears E and C.

Fix gears D with the washers/ring.

- Wow & Flutter (Fig. 28)

Set VR103 fully anti-clockwise.

Insert a magazine with test CD "Audio signals 1".

Switch to mode playback (track 1).

Confirm the signal from T.P.1 shows a value on the meter.

Adjust VR103 to min. value.

Adjust VR103 to +0.5ns.

- Tracking balance (fig. 28, 29)

Connect T.P.3 - T.P.4 with a wire.

Insert a magazine with test CD "Audio signals 1".

Switch to mode playback (track 49).

Adjust VR101 to max. symmetry (VR=0V).

Note:

Remove the wire T.P.3-T.P.4 when finished.

- Tracking offset (Fig. 28-30)

Insert a magazine with test CD 5A.

Switch to mode playback (track 9).

Adjust VR102 to min. distortion.

Adjust VR101 (tracking balance).

21. List of parts CD mechanism

Only parts listed below are considered Service parts.

203	4822 404 21317	Eject bracket
205	4822 492 33299	Extension spring
221	4822 522 33135	Idle gear
226	4822 466 10608	Foil pcb, elevator
230	4822 535 93438	Roller shaft, bottom
231	4822 532 21488	Bush on shaft 230, 267
234	4822 522 33126	Washer fix gears 239, 268
238	4822 522 33417	Large gear, rear right
239	4822 522 33133	Large gear, rear centre
242	4822 522 33131	Worm, rear centre
243	4822 530 70598	Lock washer, fix 228, 238
259	4822 466 82869	Clamper
261	4822 532 12265	Small bush, rear right
267	4822 528 70762	Roller shaft, left
268	4822 522 33414	Worm wheel, centre left
270	4822 522 33129	Gear, rear centre
271	4822 522 33415	Small gear, rear centre
272	4822 522 33416	Small gear, rear centre
274	4822 522 33132	Large gear, centre
278	4822 691 30323	Drive unit (incl. M104)
280	4822 522 33127	Worm on M102
300	4822 522 33421	Gear, on spindle 309
302	4822 535 80893	Spindle
304	4822 522 33418	Gear on M103
305	4822 522 33419	Gear on spindle 302
309	4822 535 93439	Threaded shaft
310	4822 466 10644	Foil pcb, actuate
315	4822 529 10299	Cushion
316	4822 535 93443	Shaft, Pick-up unit 50°
324	4822 535 93444	Shaft, Pick-up unit B
